

DECT Phone SkyPartner™

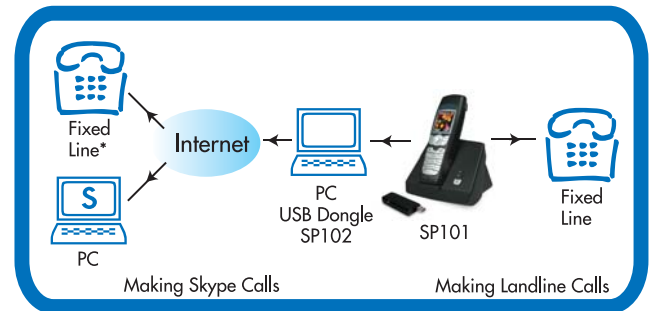

OVERVIEW

3J Communications Skype DECT phone with USB dongle SPI01 is a Dual-phone that allows users to make both Skype and Public Switched Telephone Network (PSTN) calls on the same handset. The DECT phone can be placed away from the computer, and there is no USB needed for any connection to the DECT base-station. Simply plug in the USB dongle on the PC (Skype application running on PC) and the handset will become a Skype-enabled device. The handset can be placed up to 160 feet away from the PC.

The Skype user list is clearly displayed on the 1.5" color display on the handset. Just scroll up and down the buddy list, push the 'Talk' button and the user can make a skype call.

The DECT handset is loaded with features. The Graphical User Interface (GUI) allows users to operate the phone with ease. It provides up to 120 hours standby time and 8 hours of talk time, and allows registration of up to 4 handsets to the base-station. The handset has blue keypad backlighting, handsfree speakerphone and musical ring tones.

PSTN and Skype 2-in-1
